To finally answer this, the DTSC was notified and the Regional Board is working with us on the person who will be assigned from DTSC. It could turn out that DTSC will request the Regional Board to perform oversight. As for the Prop 65 notification, the County of Riverside said they would take care of that. We will follow up. Dion

Mark Adelson from the RWQCB called regarding the sludge testing results. Evidently, the tank, spill site, and the site where the sludge is currently stored are now considered a "hazardous waste sites" based on the contaminant levels. We need to notify the Department of Toxic Substances, file a Prop. 65 notification, secure the site and so on. There are some other issues. I will tell you the rest tomorrow.
